Synopsis

The topic we have chosen is a Random Webpage Generator .

The user has to first login or signup to our website. Later, on the click of a button, he is taken through a series of random webpages that are built by us.

Each webpage is unique. The user gets to perform a different task in each webpage like playing a game, having a todo list and so on.

We plan on building 5 such webpages .

The concepts used will be **HTML, CSS , Javascript and PHP.**
